Spring Bull Sale

Inspections welcome via appointment

**Thursday
12 noon, 9 SEPTEMBER 2021**

**Gippsland Regional Livestock Exchange
and interfaced with Auctionsplus**

19 STUD BULLS

KUNUMA ANGUS

Dean Lynch Mob: 0419 295 954

Mitch Lynch Mob: 0487 648 227

Email: lynchdl@bigpond.com

Inspection can be arranged prior to the sale by appointment or on the day of the sale from 10am.

All bulls are vaccinated for Pestivirus, Vibriosis and given 7in1.

A complimentary tea and coffee available at the sale.

SELLING AGENT

Nutrien Greenwood

Ian Baker 0408 509 319

Further details back cover.

4% rebate is offered to outside agents introducing a their client 24 hours prior to sale and settling in 7 days.

EBV Descriptions

Accuracy (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase. See Understanding Accuracies (http://www.angusaustralia.com.au/BP_Understanding_Accu.htm) for a more detailed explanation.

Gestation Length (days) ~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

Birth Wt (kg) ~ Estimates of the genetic differences between animals in calf birth weight.

200-day Wt (kg) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-daywt (kg) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-day Wt (kg) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

Mature Cow Weight (kg) ~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

Milk (kg) ~ Estimates of the genetic differences between animals in milk production, expressed as variation in 200-day weight of daughter's calves.

Scrotal Size (cm) ~ Estimates of the genetic differences between animals in scrotal circumference at 400 days of age.

Days To Calving ~ Estimates of the genetic differences in female fertility, expressed as the number of days from the start of the joining period until subsequent calving.

Carcase Weight (kg) ~ Estimates of the genetic differences between animals in carcass weight, adjusted to 650 days of age.

Eye Muscle Area (CM²) ~ Estimates of the genetic differences between animals in eye muscle area at the 12/13th rib site, in a 300kg carcass.

Rib Fat (MM) ~ Estimates of the genetic differences between animals in fat depth at the 12/13th rib site, in a 300 kg carcass.

Rump Fat (MM) ~ Estimates of the genetic differences between animals in fat depth at the P8 rump site, in a 300kg carcass.

Retail Beef Yield % (RBY%) ~ Estimates of the genetic differences between animals in percentage retail beef yield, in a 300kg carcass.

Intra-muscular Fat % (IMF%) ~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcass.

Estimated Breeding Values (EBVs) are predictions of an animal's genetic merit, based on available performance data on the individual and its relatives.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -l've differences from the breed base. As the breed base is set to a historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic change within the breed. The current breed averages are shown below. These averages provide a useful benchmark for comparing EBVs for animals.
